Company Recruitment team   July 2, 2018
TracMap

Dear Recruiting Manager

I am writing this letter because I am seeing an exciting job role in your company: C++ developer under Linux. As a postgraduate student in Otago specialized in computer science, I have a strong knowledge about data structure and algorithm. Furthermore, my experience in Linux programming using C/C++ makes me have a deeper understanding of system architecture (such as exception, signals, process and thread, e.g). Therefore, I could write efficient code with constraint resources.

I like this role posted in TracMap not only because the technical skills required are my interests but also because the domain TracMap is focussing on. The tight interactions with hardware with agriculture is exciting. It is definitely an example of how computer science could boost our society in a solid way instead of just doing development for internet and social media.

I am an international student from China and because I just submitted my last report for Master of Applied Science study last week, I am currently holding the student visa. But I am applying for the work visa.

Thank you for your consideration.

Yours sincerely,

Frank Zhao
